PROFESSIONAL SUMMARY

Software developer who builds agentic AI systems end-to-end, not prototypes -- designed an eleven-agent engineering system now running in his team's daily workflow, deep in Claude's agentic tooling (Claude Code, MCP) with scoped tool access, enforced completion criteria, and human approval at every gate. Combines full-stack production experience in C#/.NET and React/TypeScript with client-facing delivery, translating business problems into working automation and multi-agent systems (Claude Code, MCP, n8n).

CORE COMPETENCIES

Multi-Agent System Design | Claude Code & MCP Integration | Agent Orchestration Across Handoffs | Guardrails & Human-in-the-Loop Design | Workflow Automation (n8n) | Cross-Department AI Translation | Client-Facing Delivery | API & Systems Integration

WORK EXPERIENCE

Genghis Technology

November 2025 - Present

Junior Full-Stack Developer

South Africa

- Designed and built an eleven-agent AI engineering system now running in the team's daily workflow, with scoped tool access, enforced completion criteria, and human approval at every gate -- distributed to the team as a versioned, peer-reviewed bundle.
- Reduced manual verification overhead, not just added oversight: a three-link completion rule requires a real pull request, a passing test run, and documentation that actually exists before a work item can close -- so the team trusts agent output without re-checking it by hand. Six architecture fitness rules (NetArchTest), with violations tracked rather than silently waived.
- Scoped autonomy deliberately: only 4 of 11 agents hold any external system access, enforced at the tool layer in each agent's own definition rather than requested in a prompt. Merges, deploys, and production migrations stay permanently human.
- Designed and delivered cross-department AI and agentic workflow training, translating unfamiliar concepts into practical, department-level applications for non-technical teams.
- Built the platform's workflow automation system end-to-end -- reusable templates separated from live runtime instances, with task assignment, ordering, and due-date rules.
- Owned a full client-facing integration deployment end-to-end: Meta configuration, webhook setup, Azure DevOps app config, deployment pipeline -- documented the process into a repeatable procedure and supported the client directly through production issues.

PROJECTS

Multi-Agent Software Engineering System

Eleven-agent system spanning discovery, scoping, implementation, review, testing, documentation, PR creation, and work-item tracking, with tool-layer access boundaries, enforced completion criteria, and human approval at every gate. In daily use by the development team.

Claude Code, MCP, Azure DevOps, React, .NET

Recruitment & Onboarding Workflow Engine

Production workflow engine: reusable templates, runtime instances, tokenized external task completion, full audit history.

C#/.NET, React, SQL Server

WhatsApp Employee Services

Production employee-service system for payroll documents via WhatsApp, including deployment automation and direct client support.

WhatsApp, Meta, Sage, Azure DevOps

EDUCATION

FET Certificate: Systems Development CTU Training Solutions

National Certificate: IT Systems Development CTU Training Solutions

CERTIFICATIONS

AI Agents & AI Automation - The Practical Agentic AI Guide	Udemy	2026
Meta Certified Digital Marketing Associate	Meta	

SKILLS

AI & agentic: Claude Code, Claude Desktop, Claude Code Skills, Subagents, Hooks, MCP servers, external MCP integrations, agent orchestration, scoped tool access, prompt & workflow engineering, human-in-the-loop design

Automation: n8n, AI-powered workflow design, business-process automation, multi-step agentic workflows, workflow orchestration, AI agent design fundamentals (RAG/CAG concepts, API integration and scalability)

Languages: C#, TypeScript, JavaScript, SQL, HTML, CSS

Backend: ASP.NET Core, REST APIs, Identity/JWT, CQRS, Clean Architecture, DDD **Frontend:** React 19, TypeScript, Vite, Redux, Axios

Databases: SQL Server, SSMS, relational data modelling, Supabase (schema design, authentication, read/write data access)

Cloud & DevOps: Azure DevOps, Application Insights, CI/CD, Docker, Proxmox, NetBird

Integrations: Sage 300, Sage VIP, LinkedIn, Careers24, WhatsApp/Meta, webhooks, OpenAPI

Tools: Git, GitHub, VS Code, Figma, Obsidian
