CTU training solutions

FET Certificate: Systems Development

National Certificate: IT Systems Development

Meta Certified Digital Marketing Associate

AI Agents & AI Automation — The Practical Agentic AI Guide (Udemy, 2026)

SKILLS

Core Technical Skills:

- C#, .NET, ASP.NET Core
- React, TypeScript, JavaScript
- SQL Server
- REST APIs & webhooks
- Claude Code & MCP
- n8n workflow automation

Bonus Skills:

- Multi-agent system design
- Supabase
- Azure DevOps & CI/CD
- Figma

Professional Skills:

- Problem-solving
- Translating AI concepts for non-technical teams
- Client-facing delivery & incident support
- Eager to learn new technologies

CAREER OBJECTIVE

I'm a software developer who builds AI-powered automation. I designed and built a multi-agent AI engineering system that's now part of my team's daily workflow, with scoped access, human approval gates, and real guardrails. My background is full-stack development in C#/.NET and React/TypeScript, and I've used that foundation to move into agent orchestration, workflow automation, and AI integration with Claude Code, MCP, and n8n. I like problems where a messy manual process needs to become something reliable enough to run unattended.

EXPERIENCE

Full-Stack Developer — Genghis Technology | Nov 2025 - Present

- Role: Full-Stack Developer (3-person team)
- Description: Own features end to end, from implementation through SIT/UAT into production. Deploy to production on a rotating basis, monitor and fix live issues using Azure Application Insights, and go client-facing when an incident needs it.
- Skills Used: C#/.NET, React, SQL Server, Azure DevOps, Application Insights

Multi-Agent AI Engineering System

- Role: Designer & Builder
- Description: Designed and built an eleven-agent system that automates parts of the software delivery workflow, with scoped tool access, a three-link rule before anything can close (a real pull request, a passing test, real documentation), and human approval at every gate. Now used daily by the development team.
- Skills Used: Claude Code, MCP, Agent Orchestration, Azure DevOps, React, .NET

Recruitment & Onboarding Workflow Engine

- Role: Full-Stack Developer
- Description: Built a production workflow engine end-to-end: reusable templates, live runtime instances, task assignment and due-date rules, and tokenized links that let external vendors complete tasks with no login. Integrates Sage 300, LinkedIn, and Careers24.
- Skills Used: C#/.NET, React, SQL Server, API Integration

WhatsApp Payroll & Employee Services

- Role: Full-Stack Developer, Client Support
- Description: Built a system letting employees request payslips, leave info, and IRP5 documents over WhatsApp, backed by Meta and Sage payroll data. Ran the full deployment end-to-end and supported the client directly through production issues.
- Skills Used: WhatsApp/Meta API, Webhooks, Sage Integration, Azure DevOps
